I find it ironic that a company which for over a decade crushes every other company in it's way, mkes billions upon billions of dollars for itself and it's founders, has destroyed any competition in the computer industry to the point where there is now only one major OS producer other than microsoft - that being Apple which only has 3% - 8% of the market share....so then there is Microsoft...around 98% market share world wide....and they get a slap on the wrist from the U.S. Government.....and we the people are supposed to have faith int he system?

The lesson here that you have provided to the next generation is that doing honest business will put you out of business....but doing mean, hurtful, monopolistic business will get you everything. In other words...if you are a crook and make \$10 and only get fined \$1...then you are \$9 ahead aren't you?
